Horus BP4Apps

Business process models and user knowledge for Oracle Cloud Applications

Cloud-based applications: future strategy on the way into digital economy

On the way into digital economy, expectations of business software applications have reached un-expected dimensions: optimal support and trans-parency of value chains, in combination with a high usability for simultaneously plummeting introduc-tion and operating costs (total cost of ownership). Constituting a platform for this digital transforma-tion, the business software has become an essential guarantor for the agility of the business models.

CIOs and CDOs all over the world have recognized the untamable quality of this bundle of requirements concerning the on-premises applications used thus far. In the context of their future strategies, the ma-jority has been choosing cloud-based applications which they obtain as software services (SaaS) and orchestrate in adaptable business processes – even across company boundaries. Oracle® with its Oracle Cloud Applications is one of the global market leaders with the most comprehensive product port-folio on the market.

Comprehensive process and user knowledge for Oracle Cloud Applications

But how do potential customers or consultants gain a fast insight into the functional performance of the Oracle Cloud Applications? How can the new software be introduced rapidly within the context of agile pro-cedures? And how do users gain a better insight into the applications during online trainings and in the con-tinuous knowledge exchange with users and experts, resulting in an increased user satisfaction and efficien-cy? Horus BP4Apps provides the answers to all these questions.

Horus® BP4Apps™ stands for ‚Business Processes for Oracle Cloud Applications‘. It is an easy-to-use knowledge-based system which is obtained as a ser-vice from the Horus Public Cloud. Extensive business process knowledge for the relevant Oracle application modules is available in the private Horus Community Portal. The user community can access the tool in a way that is target-group friendly and referring to the res-pective purpose of use. This also applies to opportuni-ties for the invaluable exchange of knowledge with-in the user community.

Knowledge Models for Oracle Cloud Apps Insight & Horus Product Components

Substantial knowledge models for technical structures of the Oracle Cloud Apps

An extensive knowledge base is the core of Horus BP4Apps and allows for a profound insight into the functional structures of the Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of the Oracle Cloud Applications. The quality and actuality of the models is backed by the Horus Partner Community, a global network of companies with comprehensive experience in Oracle business applications. In close collaboration, we have continuously documented their project know-how in knowledge models.

Advanced knowledge for BP4Apps users

The benefit of Horus BP4Apps results in the advanced knowledge provided by integrated knowledge models – a leading edge in evaluating, introducing and using the Oracle Cloud Applications on a daily basis:

- Governance through transparency
Lucid, easily comprehensible models ensure transparency in all phases of the Application Life Cycles.

- Learning and exchange of experiences
Online-training and permanent exchange of experiences in a safe social network.

- Introduction projects: more speed, low risk
Efficient requirements engineering and consistent use of best practices. A constantly up-to-date, top quality project documentation. Up-to-date, high-quality project documentation at all times.

- Securing of the business continuity
Establishment of an effective procedure for the continuous improvement of business processes under consideration of the further Oracle product development.

- Agile business strategies
Quick introduction projects, low TCO and more agility in business processes and applications allow the implementation of agile business strategies even in highly volatile business models.

Knowledge model repository in the Horus Public Cloud

Horus BP4Apps knowledge models are managed in specifically customized repositories in the Horus Public Cloud. To provide a product that is both economically and technically appropriate, Horus BP4Apps is licensed component-by-component according to the respective Oracle Cloud Application. As a matter of course, additional components in the same repository can be licensed at any time. The use of Horus BP4Apps Cloud Services includes the adaptation to new Oracle product releases and the continuous improvement of knowledge models based on newly acquired best practice experience. To see which Horus BP4Apps components are available at a specific date, go to: www.horus.biz.

Integration with Oracle Cloud Applications

You can embed Horus BP4Apps directly into the Oracle Cloud Application User Interface. In the Oracle Menu, you can navigate to the Horus Community Portal quickly and safely where the knowledge models are visualized in a way that meets the demands of the individual target groups.

Extended work with Horus Knowledge Models

Horus BP4Apps can be expanded by additional Horus products as an add-on. These are already available for the customer in the installed cloud environment so that no data can be lost.

- Horus Business Modeler
Modification and extension of the knowledge models purchased with Horus BP4Apps.

- Horus Private Community
Use of the Community Portal beyond the scope of BP4Apps.

Commercial framework

Licensing

Horus BP4Apps can be purchased directly from the producer Horus software GmbH (www.horus.biz/en/contact). The scope of delivery includes the respective licensed knowledge models as well as the use of the Horus Repository and the Horus Private Community as a service from the Horus Public Cloud. The Horus Public Cloud is hosted in a German data center.

Horus works with a worldwide network of Horus Alliance Partners who are authorized für the sales of Horus products and render qualified professional services for BP4Apps.
