

BP4 Process Manufacturing

Oracle Fusion Manufacturing Cloud Insight for Users & Application Experts

Horus BP4Apps stands for „Business Processes for Oracle Cloud Applications“ and provides comprehensive process and application knowledge for the Oracle SaaS product portfolio.

Increased operational efficiency and business growth through Industry 4.0 Technologies

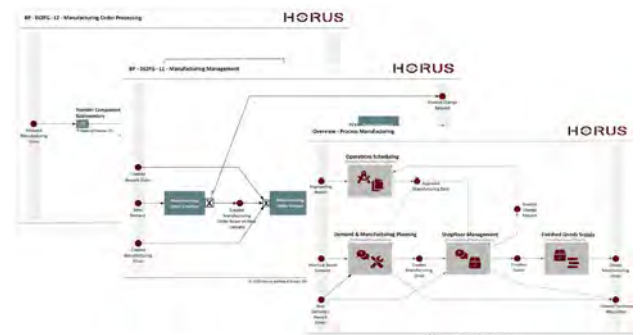

The Oracle Manufacturing Cloud allows for the operation of a hybrid, mixed-mode manufacturing environment, by means of which engineers can perform discrete as well as process manufacturing in the same plant. This guarantees an efficient management of bulk materials with by-products, and contributes additional support for standard cost planning, work order cost accounting and analytics. The production processes can be visually designed with the help of so-called work definition using drag-and-drop and can then be provided as templates for process execution.

Comprehensive process- and user knowledge for Oracle Fusion Manufacturing Cloud

With Horus BP4 Process Manufacturing, the user or application expert gains an easy-to-use, knowledge-based system which can be obtained as a service from the Horus Public Cloud.

In the private Horus Community Portal, extensive business process knowledge is made available for the relevant Oracle application modules. The user community gains

access to the tool in a target-group-friendly way and with regard to the respective intended use. The same applies to the possibility of exchanging invaluable knowledge within the user community.

Components of the knowledge product BP4 Process Manufacturing

An extensive knowledge base is the core of Horus BP4 Process Manufacturing and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Process Manufacturing areas:

- Definition of batch operations
- Monitoring of the batch progression
- Cost and quality management

Commercial Framework

The price of BP4 Process Manufacturing is determined according to the Oracle Fusion Manufacturing Cloud services licensed for the customer as follows:

Volume class	Hosted Named User	Annual subscription fee
I:	≤ 25	EUR 2.800,00
II:	26 - 100	EUR 5.600,00
III:	> 100	EUR 8.400,00

The scope of delivery includes the respective licensed knowledge models as well as the use of the Horus repository and the Horus Private Community as a service from the Horus Public Cloud. The Horus Public Cloud is hosted in a German data center.

Licensing

BP4Apps products contain product-specific knowledge models including reference processes, user instructions and test cases. Cloud licenses of the product „Horus Private Community“ with the restriction of an exclusive use with BP4Apps are included in the distribution package.

The purchase of Horus Cloud Services is based on a cloud service contract of Horus software GmbH. The customer agrees to the terms valid at the time of acquisition. The minimum contract period is 3 years. After that, it is automatically renewed each year.
