

BP4 Transportation Management

Oracle Transportation Management Cloud Insight for Users & Application Experts

Horus BP4Apps stands for „Business Processes for Oracle Cloud Applications“ and provides comprehensive process and application knowledge for the Oracle SaaS product portfolio.

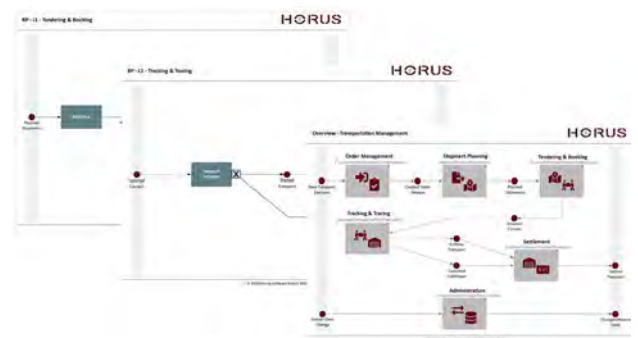

Complete Cloud-based transportation management

Oracle Transportation Management Cloud offers robust functions for the planning and execution of transports. It was developed to support both carriers and logistics service providers in the managing, tracking and optimizing of transport activities in fast-paced, global supply chains. Transport fleets, container capacities, orders and the flow of goods can be managed. In addition, Oracle Transportation Management Cloud users share a logistics dashboard which shows activities for the entire company. This way, employees can call up current transport dates and metrics in order to solve problems, identify bottle-necks and improve the overall performance. Identified users receive warning alerts for achieved milestones or impending deadlines. Managers can monitor business metrics with the help of aims, benchmarks and prognoses.

Comprehensive process- and user knowledge for Oracle Transportation Management Cloud

With Horus BP4 Transportation Management, the user or application expert gains an easy-to-use, knowledge-based system which can be obtained as a service from the Horus Public Cloud.

In the private Horus Community Portal, extensive business process knowledge is made available for the relevant Oracle application modules. The user community gains access to the tool in a target-group-friendly way and with regard to the respective intended use. The same applies to the possibility of exchanging invaluable knowledge within the user community.

Components of the knowledge product BP4 Transportation Management

An extensive knowledge base is the core of Horus BP4 Transportation Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Transportation Management areas:

- Order Management
- Tendering & Booking
- Tracking & Tracing

Commercial Framework

The price of BP4 Transportation Management is determined according to the Oracle Transportation Management Cloud services licensed for the customer as follows:

Volume class		Annual subscription fee	
Hosted Named User			
I:	≤ 25	EUR	2.800,00
II:	26 - 75	EUR	5.600,00
III:	> 76	EUR	8.400,00

The scope of delivery includes the respective licensed knowledge models as well as the use of the Horus repository and the Horus Private Community as a service from the Horus Public Cloud. The Horus Public Cloud is hosted in a German data center.

Licensing

BP4Apps products contain product-specific knowledge models including reference processes, user instructions and test cases. Cloud licenses of the product „Horus Private Community“ with the restriction of an exclusive use with BP4Apps are included in the distribution package.

The purchase of Horus Cloud Services is based on a cloud service contract of Horus software GmbH. The customer agrees to the terms valid at the time of acquisition. The minimum contract period is 3 years. After that, it is automatically renewed each year.
