

## BP4 Inventory and Cost Management

### Oracle Fusion Inventory Management Cloud Insight for Users & Application Experts

Horus BP4Apps stands for „Business Processes for Oracle Cloud Applications“ and provides comprehensive process and application knowledge for the Oracle SaaS product portfolio.

#### Comprehensive transparency and control of material management

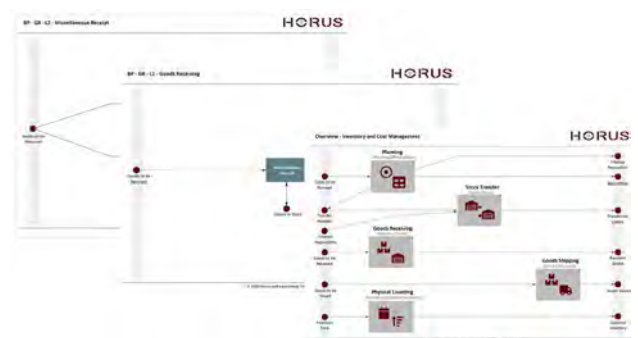

Oracle Inventory Management Cloud provides an integrated inventory-, fulfillment-, cost- and trading management suite. It was developed for the control of stocks and for the management of complex demand- and delivery scenarios and internal end-to-end transactions. With Oracle Inventory Management, companies can ensure an ideally effective management of material in the according storage areas, warehouses and production facilities – from receipt to use. The flow of incoming materials is rationalized effectively with the help of centralized, proactive monitoring mechanisms, which manage both incoming and outgoing transactions according to the respective supplier, internal location or customer. Users are guided through prescribed receipt, inspection and storage expenses, which ensure a fast and simple processing of receipts and an immediate detection and repair of exceptions.

#### Comprehensive process- and user knowledge for Oracle Fusion Inventory Management Cloud

With Horus BP4 Inventory and Cost Management, the user or application expert gains an easy-to-use, knowledge-

based system which can be obtained as a service from the Horus Public Cloud.

In the private Horus Community Portal, extensive business process knowledge is made available for the relevant Oracle application modules. The user community gains access to the tool in a target-group-friendly way and with regard to the respective intended use. The same applies to the possibility of exchanging invaluable knowledge within the user community.

#### Components of the knowledge product BP4 Inventory and Cost Management

An extensive knowledge base is the core of Horus BP4 Inventory and Cost Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, log-

ically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Inventory Management areas:

- Incoming goods
- Internal trade- and storage processes
- Delivery

## Commercial Framework

The price of BP4 Inventory and Cost Management is determined according to the Oracle Fusion Inventory Management Cloud services licensed for the customer as follows:

Volume class		Annual subscription fee	
Hosted Named User			
I:	≤ 25	EUR	2.200,00
II:	26 - 100	EUR	4.400,00
III:	> 100	EUR	6.600,00

The scope of delivery includes the respective licensed knowledge models as well as the use of the Horus repository and the Horus Private Community as a service from the Horus Public Cloud. The Horus Public Cloud is hosted in a German data center.

## Licensing

BP4Apps products contain product-specific knowledge models including reference processes, user instructions and test cases. Cloud licenses of the product „Horus Private Community“ with the restriction of an exclusive use with BP4Apps are included in the distribution package.

The purchase of Horus Cloud Services is based on a cloud service contract of Horus software GmbH. The customer agrees to the terms valid at the time of acquisition. The minimum contract period is 3 years. After that, it is automatically renewed each year.
