

BP4 Project Financial Management

Oracle Project Financial Management Cloud Insight for Users & Application Experts

Horus BP4Apps stands for „Business Processes for Oracle Cloud Applications“ and provides comprehensive process and application knowledge for the Oracle SaaS product portfolio.

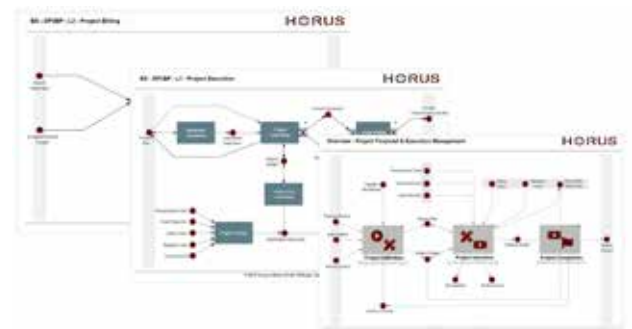

Improvement of the project profitability through complete cost controlling

The Oracle Project Financial Management Cloud is a holistic solution consisting of modern individual solutions that enable a holistic project cost controlling. The integrated application provides features for project planning, budgeting and forecast, and enables the user to capture costs from different business areas or external systems. Thanks to a fast and efficient invoicing, project invoicing and contract management processes can be optimized extensively, which secures the compliance with contract conditions. With features like subsidy administration and expenditure control, budget overruns can be observed. By using intuitive analysis tools with user-specific dashboards, real time project data can be viewed.

Comprehensive process- and user knowledge for Oracle Project Financial Management Cloud

With Horus BP4 Project Financial Management, the user or application expert gains an easy-to-use, knowledge-based system which can be obtained as a service from the Horus Public Cloud.

In the private Horus Community Portal, extensive business process knowledge is made available for the relevant Oracle application modules. The user community gains access to the tool in a target-group-friendly way and with regard to the respective intended use. The same applies to the possibility of exchanging invaluable knowledge within the user community.

Components of the knowledge product BP4 Project Financial Management

An extensive knowledge base is the core of Horus BP4 Project Financial Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Project Financial areas:

- Project planning and budgeting
- Project costs calculation
- Procurement
- Time and work recording
- Project accounting and contracts
- Subsidy management

Commercial Framework

The price of BP4 Project Financial Management is determined according to the Oracle Project Financial Management Cloud services licensed for the customer as follows:

Volume class		Annual subscription fee	
Hosted Named User			
I:	≤ 15	EUR	2.800,00
II:	16 - 50	EUR	5.600,00
III:	> 50	EUR	8.400,00

The scope of delivery includes the respective licensed knowledge models as well as the use of the Horus repository and the Horus Private Community as a service from the Horus Public Cloud. The Horus Public Cloud is hosted in a German data center.

Licensing

BP4Apps products contain product-specific knowledge models including reference processes, user instructions and test cases. Cloud licenses of the product „Horus Private Community“ with the restriction of an exclusive use with BP4Apps are included in the distribution package.

The purchase of Horus Cloud Services is based on a cloud service contract of Horus software GmbH. The customer agrees to the terms valid at the time of acquisition. The minimum contract period is 3 years. After that, it is automatically renewed each year.
