HORUS

The digital twin for YOUR organization

Nothing is as constant as change, as the driver „digitization" shows us. The consequences of digital transformation extend far beyond digital processes and products. VUCA, consisting of the terms volatility, uncertainty, complexity and ambiguity, aptly describes the state of a multilateral world and is an integral part of strategic corporate management.

The ability of companies to cope with or even benefit from change is closely connected with the quality of management of requirements and challenges in current change projects and business transformations.

One way to still operate successfully in this unpredictable business world is with the help of an organization's Digital Twin. The core of the DTO (abbreviation of the acronym: Digital Twin of the Organization) is a set of interlinked models, which in its entirety represents a transparent digital image of a company, including the details of the business processes. In addition, the strategic aspects of the company are also included in the DTO.

These structures can be successfully created with the Horus Tool.
Horus is the first professional social BPM (Business Process Management) tool for modeling, analyzing and managing business processes. The tool covers the entire lifecycle of a business process, from the initial idea to the design, use and maintenance of the process.

Business Transformation

What is Horus?

Horus stands for model-based knowledge and business process management as the basis for innovative and successful company development by using the knowledge of all process participants. For this purpose, the available software tools, methods and predefined technical knowledge bases ensure transparent and efficient business transformation.

The Horus components

Horus Business Modeler
modern BPM (Business Process Management) tool for modeling and analyzing business processes
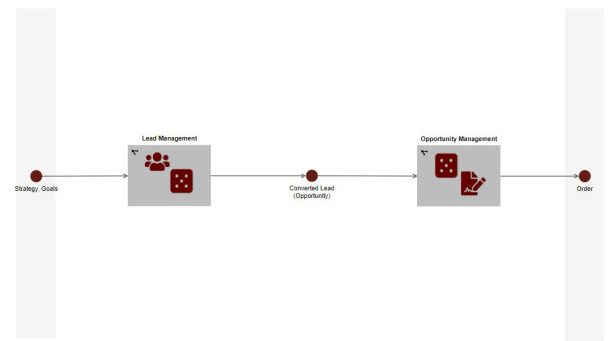

Horus Knowledge Bases
contains business standard processes, mapped in predefined and quality-assured models

Horus BP4Apps
„Business Processes for Oracle Cloud Applications" are knowledge models for the use of Oracle Cloud Applications

Horus Knowledge Explorer
by means of collaborative modeling to shape success together

Versatile application with the goal of an optimized process landscape
Horus internalizes the digital evolution and realizes it in the Digital Twin with the following applications:

- Business transformation with all areas of digitalization as well as the implementation of enterprise software solutions
- Knowledge management in the form of high-quality templates of established business processes for fast and flexible process modeling

- Knowledge management in the form of high-quality templates of established business processes for fast and flexible process modeling
- Green BPM supplements classic process management with the ecological dimension and thus ensures sustainable and economically successful action

Our expertise for your success

With the modern BPM tool Horus, which is integrated into the business processes and systematically structured, every company is prepared for the challenges of the VUCA world. The Digital Twin plays a decisive role here, because the transparent design of the processes and the visualization of changes in real time can minimize risks and thus enable a stable and secure future for the company.
