Enterprise Contracts

Comprehensive knowledge models for technical structures of the Oracle Enterprise Contracts Insight

Enterprise Contracts ensures compliant processes within your business

Companies are faced with many challenges these days. One big challenge is to keep track of all contracts and agreements affecting relevant business transactions. Since the process of managing contracts is prone to errors and hard to control, a centralized repository containing all relevant contracts, i.e. Oracle Enterprise Contracts, comes in very useful. Accurate decisions regarding procurement, sales, service and projects can be met. Another advantage is that the whole contract lifecycle, from authoring and negotiation through implementation, enforcement, evaluation and closeout, is covered.

Comprehensive process and application knowledge

With Horus BP4 Enterprise Contracts, the user or application expert receives an easy-to-use knowledge-based system, which is obtained as a service from the Horus Public Cloud. The Horus Knowledge Explorer provides comprehensive business process knowledge for the relevant Oracle application modules. The access for the users is target group oriented and related to the respective purpose of use. This also applies to the possibilities for invaluable knowledge exchange within the company.

Components of the knowledge product BP4 Enterprise Contracts

An extensive knowledge base is the core of Horus BP4 Enterprise Contracts and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Enterprise Contracts areas:

- Sales contracts
- Procurement contracts
- Service contracts
