HORUS

BP4Apps Global Trade Management

Comprehensive knowledge models for technical structures of the Oracle Global Trade Management Cloud

Optimization and monitoring of cross-border transactions

The Oracle Global Trade Management Cloud provides a unified trade and transportation platform to optimize and monitor cross-border transactions of companies, regardless of size and location. The physical flow of goods is enriched by trade data and milestones, granting companies full visibility and control over orders and shipments.

Comprehensive process and application knowledge

With Horus BP4 Global Trade Management, the user or application expert receives an easy-to-use knowledge-based system, which is obtained as a service from the Horus Public Cloud. The Horus Knowledge Explorer provides comprehensive business process knowledge for the relevant Oracle application modules. The access for the users is target group oriented and related to the respective purpose of use. This also applies to the possibilities for invaluable knowledge exchange within the company.

Components of the knowledge product BP4 Global Trade Management

An extensive knowledge base is the core of Horus BP4 Global Trade Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core consists of models for the following Global Trade Management areas:

- Global Trade Content Management
- Trade Master Data
