

## BP4Apps Inventory and Cost Management

### Comprehensive knowledge models for technical structures of the Oracle Fusion Cloud Inventory Management

#### Comprehensive transparency and control of material management

Oracle Inventory Management Cloud provides an integrated inventory-, fulfillment-, cost- and trading management suite. It was developed for the control of stocks and for the management of complex demand- and delivery scenarios and internal end-to-end transactions. With Oracle Inventory Management, companies can ensure an ideally effective management of material in the according storage areas, warehouses and production facilities – from receipt to use. The flow of incoming materials is rationalized effectively with the help of centralized, proactive monitoring mechanisms, which manage both incoming and outgoing transactions according to the respective supplier, internal location or customer. Users are guided through prescribed receipt, inspection and storage expenses, which ensure a fast and simple processing of receipts and an immediate detection and repair of exceptions.

#### Comprehensive process and application knowledge

With Horus BP4 Inventory and Cost Management, the user or application expert receives an easy-to-use knowledge-based system, which is obtained as a service from the Horus Public Cloud. The Horus Knowledge Explorer provides comprehensive business process knowledge for the relevant Oracle application modules. The access for the users is target group oriented and related to the respective purpose of use. This also applies to the possibilities for invaluable knowledge exchange within the company.

#### Components of the knowledge product BP4 Inventory and Cost Management

An extensive knowledge base is the core of Horus BP4 Inventory and Cost Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Inventory Management areas:

- Incoming goods
- Internal trade- and storage processes
- Delivery
