BP4Apps Transportation Management

Comprehensive knowledge models for technical structures of the Oracle Transportation Management Cloud

Complete Cloud-based Transportation Management

Oracle Transportation Management Cloud offers robust functions for the planning and execution of transports. It was developed to support both carriers and logistics service providers in the managing, tracking and optimizing of transport activities in fast-paced, global supply chains. Transport fleets, container capacities, orders and the flow of goods can be managed. In addition, Oracle Transportation Management Cloud users share a logistics dashboard which shows activities for the entire company. This way, employees can call up current transport dates and metrics in order to solve problems, identify bottle-necks and improve the overall performance. Identified users receive warning alerts for achieved milestones or impending deadlines. Managers can monitor business metrics with the help of aims, benchmarks and prognoses.

Comprehensive process and application knowledge

With Horus BP4 Transportation Management, the user or application expert receives an easy-to-use knowledge-based system, which is obtained as a service from the Horus Public Cloud. The Horus Knowledge Explorer provides comprehensive business process knowledge for the relevant Oracle application modules. The access for the users is target group oriented and related to the respective purpose of use. This also applies to the possibilities for invaluable knowledge exchange within the company.

Components of the knowledge product BP4 Transportation Management

An extensive knowledge base is the core of Horus BP4 Transportation Management and allows the user a profound insight into the functional structures of Oracle Cloud Applications. This knowledge base consists of easily comprehensible, logically linked models that provide different perspectives on the user-relevant aspects of Oracle Cloud Applications.

The core is formed by models to the following Transportation Management areas:

- Order Management
- Tendering & Booking
- Tracking & Tracing
