Horus BP4Apps

Business process models and application knowledge for Oracle Cloud Applications

Expectations of modern enterprise software applications have reached unimaginable dimensions: optimal support and transparency of value chains in combination with high user-friendliness and simultaneously decreasing implementation and operating costs. As a platform for digital transformation, enterprise software is becoming an essential safeguard for the agility of business models. Companies are opting for cloud-based applications, which they obtain as software services (SaaS) and orchestrate in adaptable business processes - even across company boundaries. Oracle® with its Oracle Cloud Applications is one of the global market leaders with the most complete product portfolio in the market.

But what functional and business performance do Oracle Cloud Applications offer? How can the new software be introduced quickly as part of agile processes? And how can a sustainable knowledge exchange between users and experts lead to higher user satisfaction and thus an increase in efficiency? Horus BP4Apps provides the answers to all these questions.

Horus® BP4Apps™ stands for “Business Processes for Oracle Cloud Applications“ as well as for “Oracle NetSuite Applications“ and includes Solutions for the areas: ERP, EPM, SCM, CX and HCM. It is an easy-to-use knowledge-based system that provides users with comprehensive business process knowledge.

Oracle Applications

Business Transformation

Abundant knowledge models for technical structures of Oracle Cloud Apps

At the heart of Horus BP4Apps is an abundantly filled knowledge base that allows users to gain deep insight into the technical structures of Oracle Cloud Applications. This knowledge base consists of easy-to-understand, logically linked models that provide different views of the aspects of Oracle Cloud Applications that are relevant to users. Behind the quality and timeliness of the models is the Horus Partner Community, a global network of companies with extensive experience in the environment of Oracle Enterprise Applications, with project know-how that has been continuously documented in knowledge models in cooperation with Horus.

Knowledge advantage for BP4Apps users

The benefit of Horus BP4Apps comes from the knowledge advantage enabled by the integrated knowledge models – advantage in the evaluation, introduction and in the daily use of Oracle Cloud Applications:

- *Governance through transparency*
  Clear, easy-to-understand models ensure transparency through all phases of the application life cycle.
- *Implementation: higher speed, lower risk*
  Efficient requirements engineering and consistent use of best practice.
- *Agile corporate strategies*
  Fast implementation projects, low TCO and more agility in business processes.
- *Learning and exchange of experience*
  Online training and ongoing exchange of experiences in a secure social network.
- *Ensuring business continuity*
  Establish an effective process for ongoing business process improvement, taking into account Oracle product development.

Seamless integration

The Horus BP4Apps knowledge models are managed for the customer in a dedicated repository in the Horus Public Cloud. The use of the Horus BP4Apps Cloud Service includes the adaptation to new Oracle product releases as well as an ongoing improvement of the knowledge models based on newly gained best practice experience. Horus BP4Apps are embedded directly in the user interface of Oracle Cloud Applications. This ensures direct access to the target group-specific knowledge models.
